# How PMO Tools Bolster Remote Working

Sycamore Gap

PMO: MADE FOR REMOTE WORKERS

Remote working has become the norm for many project teams within the last couple years; professionals often choosing to work from home or away from the office at least a few days a week. As such, it's important that project teams have a defined, collaborative and easily-accessible way of working, tracking projects and communicating; all provided by our PMO solution.

COULD OUR PMO TRANSFORM THE WAY YOUR TEAM WORKS?

Track project stats, configure documents, and mitigate risks with Sycamore Gap's PMO solution. Our PMO offers a consistent look'n'feel plus a simple navigation between familiar Office products; providing a confident and comfortable user experience with very little training needed.

PMO TOOLS AND REMOTE WORKING: THE IDEAL MATCH? ⌄

1 **Improving communication:** PMO tools provide a way for project teams to communicate online – share project stats and view real time project updates; improving communication between all members of the team and ensuring that everyone involved is kept up-to-date.

2 **Task visibility and ownership:** PMO software also provides clear and concise task visibility, as well as providing an overview of who the owner or responsible person is for each task – ensuring that, no matter where your team is working or what their schedule looks like, everyone knows what they're responsible for!

3 **Risk management:** risk management and mitigation are essential to project management teams and PMO tools such as that offered by Sycamore Gap include a traffic light system specifically to highlight levels of risk – providing an easy-to-read overview of any potential and/upcoming risks.

4 **Reporting functions:** reporting is essential to fostering productive and motivated project teams; providing a valuable overview of how projects are progressing, any improvements that need to be made, and any arising risks/barriers to completion.

5 **App-based software:** Sycamore Gap's pre-built PMO software also provides one solution to all project needs; an app-based and therefore cloud-based solution that moves away from traditional copy 'n' paste Excel spreadsheets and saving multiple versions of the same documents on individual computers – meaning that all team members have access to the most up-to-date project information available.
