WHAT MAKES A GOOD PMO?

A good PMO puts productivity, collaboration, risk management and KPI tracking at the very centre of your project teams – improving your processes whilst supporting you to increase the value of your project portfolio.

FEATURES THAT MAKE A GOOD PMO

Every PMO is different and, as such, has different needs and requirements when it comes to PMO software. However, when it comes to the features that make a good PMO verses an inefficient PMO solution, there are multiple common themes.

WHAT SHOULD A GOOD PMO DO?

- 1 Flexibility and customisation:** a good PMO tool will be flexible and customisable – offering you the ability to adapt and change elements of your PMO to suit your organisation’s unique processes, language and branding.
- 2 Collaboration tools:** PMO tools should offer an effective way for project teams to collaborate and communicate as an absolute priority; a well-informed and supported project team making a productive and motivated team.
- 3 Instant update features:** app and cloud-based PMO tools offer instant update features, saved within the app or on the cloud where all team members can access, amend and share required updates.
- 4 Risk management features:** fundamental to project management and Project Management Offices is the ability to effectively manage and mitigate risks and, as such, a good PMO solution will offer risk management features.
- 5 App-based software:** Sycamore Gap’s pre-built PMO software also provides one solution to all project needs; an app-based and therefore cloud-based solution that moves away from traditional copy ‘n’ paste Excel spreadsheets and saving multiple versions of the same documents on individual computers – meaning that all team members have access to the most up-to-date project information available.
